The City of Highland Park Water Treatment Plant laboratory is not certified for metals analysis. Please contact any one of the laboratories listed and they will be able to help you with your testing needs. It is important that the USEPA lead sampling protocol be followed to obtain meaningful results: first morning draw after at least 6 hours with no water use in the home, cold water only, from a sink regularly used for drinking water (kitchen or bath) which has NO filter or other treatment attached or upstream. Labs will send a sampling kit to you which includes sampling instructions and a sample bottle. Once you have collected your water sample, you are required to return the sample back to the lab where they will analyze your drinking water for lead. You will receive a report of the findings within the turn around time listed.
