Potential Mine Subsidence within Lincoln County, Wyoming

Legend
- Underground Hard Rock Mines
- Underground Coal Mines
- US Highways
- WY Highways
- County Roads
- Municipalities

1 inch equals 20,000 feet
1:240,000

Map created by Destry Dearden, Lincoln County GIS Coordinator. Subsidence data was developed partially by digitizing copies of old mining records. The data is not complete, and some locations may have been missed. Zones identified as having potential subsidence effects should not be considered exclusive. Municipalities, County Roads, and US Highways were added to the map for planning purposes. It is recommended to have at least a 150-foot buffer around the mine workings is not exact. Municipalities, County Roads, and US Highways were added to the map for planning purposes. It is recommended to have at least a 150-foot buffer around the mine workings is not exact.
