

ACCCA PLANT LISTS

Sorted alphabetically by common name. An alphabetical listing sorted by plant type (accent, ground cover, shrubs, trees) is listed online in the Documents section of the website, www.onlineatanthem.com.

The ACCCA Plant Lists were developed by the developer and apply to residential Lots of the Anthem Country Club community. Homeowners should research the plant lists, material choices, and location guidelines to ensure compliance. Size, light and water requirements, as well as physical qualities of the desired plant such as spines, sharp tips, allergens, amount of litter and plant parts that are unhealthy to people and pets should be considered.

Plant lists are specific to the

- front yard zone, with full visibility,
- semi-private zone, with low visibility,
- and private zone.

The lists include native, near- native, and non-native plants and trees. A list of prohibited plants is provided and restricted from any area in the Anthem Country Club community. Residents may apply for plant approval to the Lifestyle Enhancement Committee (LEC) for plants not listed.

*Asterisk indicates Firewise Plants: Anthem was named a Firewise Community by the National Firewise Community/USA in 2010. Firewise plants are more fire resistant as they maintain a high-moisture content, low resin content, grow slowly and do not need frequent pruning. The use of Firewise plants is recommended.

Plant Key: A - Accent Plants (includes cactus and succulents); GC - Ground Cover; S-Shrubs; T-Trees

Accent Plants: Accent plants are intended to create points of interest in the front and rear yard. Utilize a limited variety of plants in small groupings or clusters to create a unique focal point in the landscape. Random, scattered, free-standing plants are not recommended; using clusters of accent plants with boulders, berms and trees is recommended.

Ground Cover: Plant groundcover plants in small groups of three or more similar plants to create the most desirable design composition. Random, scattered, free-standing planting is not recommended. Groundcover is best used as a foreground material to provide color adjacent to walks or entrances.

Shrubs: Utilize shrubs to create “foundation” planting adjacent to the home. This provides a transition between the home and the ground plane. Shrubs also may be used to provide a good backdrop for groundcover and accent.

Trees: All trees (new or replacement) require LEC approval before planting. When determining tree placement, remember to consider the size of the tree canopy and root system prior to planting. **In small yards, an ocotillo or cactus (Saguaro, Mexican Fence Post, Desert Night Blooming Cereus, Senita, Yucca) may be used in place of a tree.**
