

Breitung Township Fire Dept. Report

CTOB Board Meeting 4/11/22

We have been offered a possibility of a structure that could be used for training and or live burns. We are interested in using the structure for various training evolutions that would be conducted without actual fire. These would include laddering, forceable entry techniques, search and rescue, along with RIT, (Rapid Intervention Team) exercises. We would like to also conduct a live burn exercise if it would be feasible. We will have to look into the required environmental testing/permitting required, and what would be needed to meet the NFPA Standard for conducting Acquired Structure Training Burns. We would not be looking at doing this before late summer, early fall.

On March 28th I, along with several other Fire Fighters, attended a training program presented by the Pipeline Operators. This is training that normally is offered on an annual basis but has not been available the last couple of years.

Update on the dinner. 5 PM Social Hr. starts, 6:00PM Welcome followed by dinner, program (speaker and presentations). As of right now we have 36 confirmed reservations. As of Friday morning, our speaker will be unable to attend do to a death in the family. We do have a tentative replacement that will hopefully confirm by Friday afternoon.

We have been receiving and distributing some of the personal protective gear that was ordered in 2021, and early 2022. This consists of Helmets and Boots. The Bunker Coats and Pants are not expected for several months.

Respectfully Submitted

Jim Rose
