

Earth Machine™ Assembly Instructions

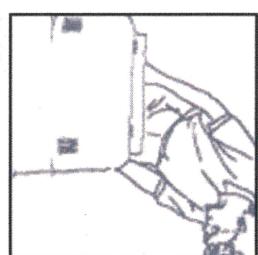

Step 1
Twist and remove the lid.

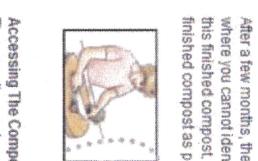

Step 2
Place the bottom section on the ground, and set the top section on top of it.

IMPORTANT: Make sure that the arrows on the top and bottom sections line up. Also, the bottom of the top section should sit in the groove on the top of the bottom section.

Step 3
Check the outside and inside with your hand to ensure the 6 tabs line up with the 6 slots.

Step 4
Unscrew the four pegs.

Lift the Earth Machine™ up and off the pile, and set it aside.

Place any unfinished compost in a container or pile.

Replace your bin in the original footprint, and screw it down.

Put the unfinished compost back in your Earth Machine™.

TIP: You can make your own compost screen in minutes with 1/4 inch hardware cloth and a wood frame.

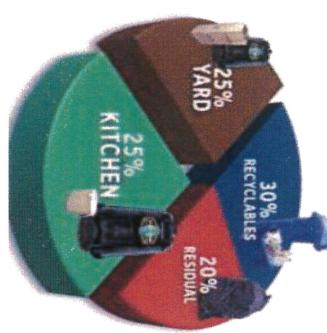

You may want to use a compost screen to help separate the unfinished material from the finished compost.

The Big Picture

Glad to have you composting!

By composting and recycling, you can reduce the amount of garbage you generate by up to 80%. It quickly becomes routine and makes a big difference.

The added bonus is that the compost you generate will make your garden and lawn healthier and less dependent on chemicals, fertilizers and watering.

Accessing The Compost Pile

There are times when you want to access the entire pile. All you do is:

Slide the harvest door in place, bending slightly if necessary.

TIP: You can make your own compost screen in minutes with 1/4 inch hardware cloth and a wood frame.

Put the unfinished compost back in your Earth Machine™.

Replace your bin in the original footprint, and screw it down.

Put the harvest door back in place.

Twist and remove the lid.

Put the top section back on top of the bottom section.

Screw the four pegs back in.

Harvesting Small Amounts

Your Earth Machine™ comes with a door at the bottom for quick access to finished compost. Just lift the door and dig the material out of the bottom. What could be simpler?

Accessing The Compost Pile

After a few months, the kitchen scraps near the bottom of your Earth Machine™ will have decomposed to a point where you cannot identify the materials you added and will look much like soil. There are two ways of harvesting this finished compost, one when you just want a few shovels of compost, and another when you want as much compost as possible.

Harvesting Large Amounts

After a few months, the kitchen scraps near the bottom of your Earth Machine™ will have decomposed to a point where you cannot identify the materials you added and will look much like soil. There are two ways of harvesting this finished compost, one when you just want a few shovels of compost, and another when you want as much compost as possible.

Frequently Asked Questions

Where to Put Your Earth Machine™

Will my compost smell?
Properly running compost bins should not give off any unpleasant odors – if anything, they should be almost sweet-smelling. If you do notice any unpleasant odors, mix it well with a compost turner or pitchfork to get more air into the pile, and add some more “browns” (e.g. leaves) to dry it out. Don’t add piles of grass clippings all at once, as they will give off an ammonia-like smell. Always make sure not to put any meat, dairy, oil or fat products in your Earth Machine™ Compost Bin.

How long before I have compost?

Most people find that they can harvest finished compost from the bottom of their pile every 4 to 6 months or so. However, if you have a good mix of “greens” and “browns”, stir thoroughly and frequently, and keep it from getting too wet or dry, you will find you can ‘cook’ a batch of compost in as little as 6 weeks.

What do I do to get rid of fruit flies?

During the summer, you may be greeted by fruit flies when you open your Kitchen Collector or Earth Machine™ To keep them at bay in the kitchen, make sure to secure the lid latch on your Kitchen Collector tightly and empty it frequently. At your Earth Machine™, add leaves or a thin layer of soil each time you add fresh material.

What can I do to keep raccoons, squirrels, rodents and dogs out of my Earth Machine™?

Occasionally, an eager pest will decide to take a liking to your Earth Machine™, so here are a few things to help keep those critters away:

- Always make sure not to put any meat, dairy, oil or fat in your Earth Machine™.
- Burn fresh material in the compost pile.
- Keep the harvest door fastened by placing a stick through the matching holes in the door and Earth Machine™.
- Place bricks or flat stones around the base of the Earth Machine™.
- Add dog hair to the compost

If the problem persists, you can line the bottom of the Earth Machine™ with a layer of chicken wire.

If my Earth Machine™ fills up too quickly, what should I do?

Use your Earth Machine™ primarily for kitchen waste, as yard waste will fill it up in a hurry. If you generate too much kitchen waste for one Earth Machine™, consider getting a second one.

How should I handle yard waste?

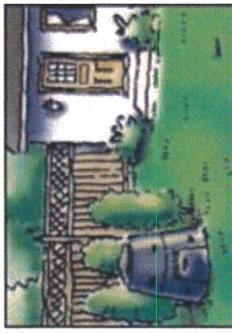

Consider buying or making a large yard waste compost bin, and keep it close to your Earth Machine™ so you have a ready source of cover material. It is helpful to keep some bags of leaves aside for use throughout the year.

How moist should my compost pile be?

The rule of thumb is to keep the material as moist as a wrung-out sponge. In arid climates, this means you will have to periodically add water to the pile, or make a point of adding wet materials to the Kitchen Collector (e.g., leftover coffee). In rainy areas or seasons, you may need to add dry leaves, aerate the pile with a pitchfork or compost turner, or leave the lid of compost off on sunny days.

Is there a way to make winter composting in the snowbelt easier?

Hopefully, your Earth Machine™ is located close to your back door so you don’t have to shovel a long path to it. If not, leave an old garbage can next to the back door and empty your Kitchen Collector directly into it. Once spring comes you can just add it to your Earth Machine™, together with some leaves or other browns.

Once you have chosen your location, just set your Earth Machine™ in the desired location and secure it with the four plastic screw pegs. You are now ready to compost.

TIP: It helps to put your Earth Machine™ in a well-drained spot. You can speed things up by cutting out the sod under the Earth Machine™ to invite worms and microbes in and improve drainage.

Composting Starts In The Kitchen

To keep material from sticking to the bottom and sides of the Kitchen Collector, line it with a sheet of newspaper or paper towel. When you empty the pile into your Earth Machine™ every couple of days, it will slide out cleanly. Give your Kitchen Collector a quick rinse after you empty it and re-line it. The newspaper or paper towel will compost in your Earth Machine™.

What To Compost

Your Earth Machine™ will work best if it is fed a diet of green (nitrogen-rich) and brown (carbon-rich) materials. Check out the list of kitchen and yard waste “greens” and “browns” that will keep your Earth Machine™ happy.

KITCHEN GREENS

Fruit scraps, vegetable scraps
Houseplant cuttings
Coffee grounds
Rice & pasta
Egg shells
Tea bags

YARD GREENS

Flowers
Vegetables
Plant trimmings
Hedge clippings
Grass (small amounts)

KITCHEN BROWNS

Coffee filters, stale bread
Paper napkins & towels
Dryer lint
Hair

TIP: Keep the material in your Earth Machine™ about as moist as a wrung-out sponge.

EMPTY
Once your Kitchen Collector is full, take it to your Earth Machine™ and empty it out.

CHOP

It helps to chop up larger items like watermelon rinds or corn cobs before putting them in your Kitchen Collector.

STIR

Mix the new material into the existing pile using a Compost Turner, pitchfork or other garden tool. This also adds oxygen, a key component to successful composting.

COVER

Cover your food waste with a handful of old leaves, other dried yard waste or soil. This will add carbon and reduce the chance of odors and miffles. Then put the lid back on and let it “cook”.

LARGE BROWNS
Leaves
Straw or hay
Small twigs/chips
Dried grass and weeds
