

Fourth of July Fireworks Displays 2019 - 2023 Response to RFP Questions

Where will the shoot site be?

The City typically uses the Highland Park Country Club as the shoot site and people watch the fireworks from a location across the street, Wolters Field. We do have some sight line issues and have been exploring alternate locations.

How big is the shoot site?

The current shoot size is approximately 5,264,612 square feet, 120 acres, and 0.2 square miles. However, the City would like to explore potentially shooting fireworks off of the beach. This has not been confirmed. The City would like to explore the use of close proximity fireworks as a possible option if the location is changed.

How big has the minimum shell size been in the past?

The shell size ranged from 2.5" to 8". However, the lower shells were hard to see over the tree canopy.
