PERMIT FEE: \$25.00 SIGNATURE OF APPLICANT: _____

1. The applicant named hereon is responsible for adequately and properly protecting the public from loss or injury due to the work permitted. The following shall constitute proper protection:
 - a) The applicant must comply with the Alabama Manual on Uniform Traffic Control Devices. All devices must be in place prior to start of construction and shall be properly maintained by applicant during construction.
 - b) The applicant shall assume all liability and protect, indemnify, and save harmless the City of Hueytown and its employees or agents from any and all claims originating from this work and from any and all liability or claims arising from its use or occupancy of said area covered in this revocable permit. Whenever any person, firm or corporation making any excavation in the street, highway, or ally fails to refill, in the proper manner, as required by item 11 of these specifications or fails to maintain the same for a period of one (1) year, then the local governing body shall cause the work to be done and the cost thereof shall be charged against the bond as required in item 7 of these specifications.
2. If the work contemplated requires a road to be temporarily closed, an inspection on the ground by the Hueytown City Engineer or the City Engineers duly authorized representative will be necessary before a permit is issued.
3. If the service to be installed under this permit is to be placed underground, the cable, conduit or pipe shall be placed not less than 30 inches below the road surface and not less than 18 inches below the bottom of any ditch or gutter. In the event the service

parallels the roadway, such service must be placed 4 feet inside the right of way or if this is not practicable, 4 feet from the edge of any existing pavement or 14 feet from the center of an unpaved road. Should it be impracticable to maintain the above measurements, additional authority must be obtained from the Hueytown City Engineer.

4. The City of Hueytown reserves the right to make changes in grade, width, and alignment of the roadway at any time and to require the owner of any pipe or conduit and appurtenances to confirm to such changes at the applicants own expense.
5. Public or private service corporations shall furnish a map 8 1/2 inches by 11 inches or multiples thereof in duplicate showing location of utility to be installed. No map is required on individual services.
6. This permit may be revoked at any time by the City either during the progress of the work or at any time after the completion of the work if the provision under which this permit was issued are not complied with or the provisions of any applicable Ordinance are not complied with and the owner agrees that the applicant will remove any part or all of any installation made under this permit, at no cost to the City if such removal is ordered by the City.
7. A bond as required by the applicable Plumbing, Gas or Electrical Code will be required of any applicant for a permit to excavate in any public easement or right of way.
8. This permit is limited to the interests and rights of the City of Hueytown in and to the area involved without warranty.
9. This permit, if granted, shall constitute an agreement and warranty on the part of the applicant that all work required will be done in a good and workmanlike manner to be approved by the City and at the sole expense of the applicant. Where the valuation of any work proposed under this permit does not exceed \$3,000.00, the work shall commence within thirty (30) calendar days, otherwise the permit shall become void.
10. The applicant shall be responsible for any and all drainage problems resulting from the work done hereto and shall be obligated promptly to complete the work in the area covered by this permit subject to the approval of the Public Works Department and to restore the land and easements in as good condition as before the work was commenced.
11. All excavations shall be as small in areas as practical. Ditches shall be neatly cut with the sides kept vertical. Ample shoring shall be furnished and maintained where necessary. Material for back-filling shall be placed in 6 inch layers. Each layer shall be carefully tamped until completely compacted before adding the next layer. In-compressible back-fill material (sand, slag, crushed stone, or gravel) will be required in all cuts that are made in pavement and in addition a permanent patch of two (2) inches of plant mix will be required immediately after back-filling as completed. In cuts that are within three (3) feet of the edge of pavement, if, in the opinion of the inspector, the excavated materials are unsuitable for tamping, suitable material will be provided by the contractor to back-fill, and all unsuitable material shall be disposed of by the contractor. Upon completion of back-filling, trenches shall be inspected by the Hueytown Public Works Department prior to the time such inspection is desired. In all cuts made in concrete, the applicant shall back-fill as provided above, and repair or replace with new concrete of the same thickness as that of existing concrete, but not less than four (4) inches minimum thickness.
12. This permit must be kept on the job while work is in progress.
