RE: South Church Street & Mill Street Road Construction and Water Main
Project Start & Lead Informational Notice

Dear Water Customer:

The Village of Huntley will soon be performing planned road construction and water main work on Mill & South Church Streets. This is a roadway and water infrastructure improvement or repair project the Village of Huntley completes on a regular basis to assure our customers have safe, affordable and reliable water service. We are required by Illinois law to provide notice of construction or repair work on a water main, service lines, or water meters to potentially affected residences no sooner than fourteen days prior to the planned work or as soon as reasonably possible for emergency repairs.

The Mill and South Church Street watermain and roadway construction will be completed as part of the Village's 2023 Capital Improvement Projects.

The watermain work planned on Mill and South Church Streets includes the replacement of the old aging watermain, fire hydrants and individual property water service line replacements.

Church Street between Main Street & Mill Street and Mill Street between Grove Street & the railroad tracks will be reconstructed with new storm sewers curb and gutter, roadway pavement, sidewalks, driveway approaches and street lighting. Roadway resurfacing, spot repairs to the curb and sidewalks are planned to be performed on Mill Street between Grove Street & Myrtle Street.

The planned water main work is anticipated to start as soon as April 18th and the roadway reconstruction is expected to be completed by the middle of July 2023. You will receive further information and notifications when future work impacts your water service or access to your driveway.

The planned water main work that will affect water service to your property is anticipated to begin as soon as the third week of April 2023. At this time, we anticipate one (1) planned water main shut down to your property that will require a water boil order notice to be in effect. The Village will distribute notices and additional information in advance of this planned work being performed.

The Lead Service Line Replacement and Notification Act, Public Act 102-0613, was signed into law August 27, 2021 with an effective date of January 1, 2022. This Act indicates that the Illinois General Assembly declares, for the general health, safety and welfare of its residents, all lead service lines in Illinois should be disconnected from the drinking water supply. This Act created Section 17.12 of the Environmental Protection Act (415 ILCS 5/17.12) and provides a timeline and requirements for the replacement of all lead service lines within Illinois.

In the event that lead or galvanized steel water service line material to your property has already been identified or is discovered during construction you will be contacted to discuss the next steps that the Village is required to take to comply with the current Lead Service Line Replacement and Notification Act, Public Act 102-0613.

If you have any questions, please Village Public Works and Engineering at 847-515-5222 to obtain more information.

You may also contact Greg Sanders, Resident Engineer, Christopher B. Burke Engineering, at 847-417-0059 (gsanders@cbbel.com) with questions or concerns with the project.

Sincerely,

Village of Huntley Public Works & Engineering Department

Lead Informational Notice

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Dear Water Customer:

Today's Date: April 4, 2023

This notice contains important information about your water service and may affect your rights. We encourage you to have this notice translated in full into a language you understand and before you make any decisions that may be required under this notice.

Diese Mitteilung beinhaltet wichtige Informationen über Ihre Wasserversorgung und könnte Ihre Rechte beeinflussen. Wir bitten Sie, dass Sie diese Mitteilung vollständig in eine Sprache übersetzen lassen, die Sie verstehen, bevor Sie eventuelle Entscheidungen treffen, welche im Zusammenhang mit dieser Benachrichtigung erforderlich sind.

Ang abisong ito ay naglalaman ng mahalagang impormasyon tungkol sa iyong serbisyo sa tubig at maaaring makaapekto sa iyong mga karapatan. Hinihikayat namin kayo na isalin nang buo ang abisong ito sa wikang naiintindihan ninyo at bago kayo gumawa ng anumang mga desisyon na maaaring kailanganin sa abisong ito.

Lead Informational Notice

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Our water system will soon begin a water line maintenance and/or construction project that may affect the lead concentrations in your drinking water. Lead, a metal found in natural deposits, is harmful to human health, especially young children, and pregnant women. It can cause damage to the brain and kidneys and can interfere with the production of red blood cells that can carry oxygen to all parts of your body. The most common exposure to lead is swallowing or breathing in lead paint chips and dust. However, lead in drinking water can also be a source of lead exposure. In the past, lead was used in some water service lines and household plumbing materials. Lead in water usually occurs through corrosion of plumbing products containing lead; however, disruption (construction or maintenance) of lead service lines may also temporarily increase lead levels in the water supply. This disruption may be sometimes caused by water main maintenance/replacement.

The purpose of this notice is for informational purposes only. While it's not known for certain whether this construction project will adversely affect the lead (if present) plumbing in and outside your home, below describes some information about the project and some preventative measures you can take to help reduce the amount of lead in drinking water.

Project Start Date: April 18, 2023 Project expected to be completed by: Mid July 2023

Project location and description: **South Church Street and Mill Street Streetscape Improvements**

Church Street: Replacement of old aging water main from Main Street to Mill Street

Mill Street: Replacement of old aging water main from Myrtle Street to Railroad Tracks

What you can do to reduce lead exposure in drinking water during this construction project:

- *Run your water to flush out lead.* If the plumbing in your home is accessible; you may be able to inspect your own plumbing to determine whether you have a lead service line or lead solder. Otherwise, you will most likely have to hire a plumber.
 - If you do not have a lead service line, running the water for 1 – 2 minutes at the kitchen tap should clear the lead from your household plumbing to the kitchen tap. Once you have done this, fill a container with water and store it in the refrigerator for drinking, cooking, and preparing baby formula throughout the day.
 - If you do have a lead service line, flushing times can vary based on the length of your lead service line and the plumbing configuration in your home. The length of lead service lines varies considerably. Flushing for at least 3 – 5 minutes is recommended.
- *Use cold water for drinking, cooking, and preparing baby formula.* Do not cook with or drink water from the hot water tap; lead dissolves more easily into hot water. Do not use water from the hot water tap to make baby formula.
- *Look for alternative sources or treatment of water.* You may want to consider purchasing bottled water or a water filter that is certified to remove "total lead".
- *Clean and remove any debris from faucet aerators on a regular basis.*
- *Do not boil water to remove lead. Boiling water will not reduce lead.*
- *Purchase lead-free faucets and plumbing components.*
- *Remove the entire lead service line.*
- *Test your water for lead.* Call us at: [847-515-5222](tel:847-515-5222) to find out how to get your water tested for lead. While we do not do the testing, we can provide a list of laboratories certified to do the testing. Laboratories will send you the bottles for sample collection. Please note that we are not affiliated with any laboratory, and they will charge you a fee.
 - If test results indicate a lead level above 15 ug/L, bottled water should be used by pregnant women, breast-feeding women, young children, and formula-fed infants.
