

Centegra Health System opens cardiac catheterization lab in Huntley

By Submitted report

June 15, 2018

Centegra Health System has opened a second cardiac catheterization laboratory at Centegra Hospital – Huntley.

“Cardiac catheterization is used to diagnose and treat a number of heart conditions, such as coronary artery disease, heart valve disease and heart muscle disease,” said Dr. Asim Zaidi, medical director of the lab at the Huntley hospital and a cardiologist with Centegra Physician Care.

The Illinois Department of Public Health approved the second catheterization lab June 4 after a rigorous inspection. Between its McHenry and Huntley facilities, Centegra now has five cardiac catheterization labs.

For information, visit centegra.org, search for Centegra on Facebook and Twitter or call [877-236-8347](tel:877-236-8347).
