The Weiler Engineering Corporation

(Scope of Services for Providing Final Design, Permitting and Engineering Services for a new stormwater management system at Venetian Shores)
Venetian Shores – Phase 1 – Village of Islamorada – RFQ – 18-08

PROJECT DESCRIPTION

Venetian Shores is a residential, canal front community within the Village of Islamorada. The subdivision is located on the north side of Overseas Highway at Mile Marker 86. The community frequently experiences stormwater management problems, even during small rain events. In 2015, the Village contracted with Weiler Engineering to complete a second study on stormwater problems specifically within Venetian Shores. The study concluded that aside from roadside ponding, the direct discharge of stormwater into the neighboring surface waters as caused by the lack of a stormwater management system was problematic. The canal system discharges into Snake Creek and the Florida Bay as well as the Florida Reef Tract, which are considered Outstanding Florida Waters.

General project objectives include managing and protecting water resources of the region by balancing and improving flood control, water quality and natural systems. The project specific objectives are to improve the quality and reduce the quantity of stormwater discharges into nearshore waters of Florida Bay and the Florida Reef Tract.

The South Florida Water Management District has awarded the Village a grant for design and construction of a stormwater management system along Bayview Drive, Villa Bella Drive and portion of Venetian Boulevard (Phase 1). Consequently, the Village requires Professional Design, Engineering and Permitting for the stormwater management system at Bayview Drive, Villa Bella Drive and a portion of Venetian Boulevard. The goal of implementing a stormwater management system in the Venetian Shores neighborhood is to reduce or eliminate the frequency and duration of standing water on the roadways. The final design of the stormwater management system will reflect a plan that will sufficiently manage stormwater for a given storm event.
