

**SPECIAL TOWN MEETING EXPLANATIONS**  
**May 21, 2025, at 7:15 PM**

**Article 1-** To see if the Town will vote to transfer from Sewer Retained Earnings the sum of \$12,000 to replace the controller panel unit at the Elm Street Pumping Station.

The Electrical Controller panel at the Elm Street Pumping Station no longer works. The station is currently running on backup float mode which is not something that can or should be done long term. The current controller panel is the original and is two models outdated. They can no longer be serviced and replacement parts are no longer made. We would need to find warehouses with spare parts. The electrical unit for the second pump station will need to be replaced next year with a matching system so new replacement parts can work for both stations. As there are no designated funds for this repair, a transfer needs to be made from that account.
