January 29, 2016

The Retirement Board
City of Riverview Retirement System
Riverview, Michigan

Dear Board Members:

Submitted in this report are the results of the fifty-fifth annual actuarial valuation of the City of Riverview Retirement System. The purpose of the valuation was to measure the System's funding progress and to determine an employer contribution for the corresponding fiscal year. This report should not be relied upon for any other purpose. This report was prepared at the request of the Board and is intended for use by the Board. This report may be provided to parties other than the Retirement Board only in its entirety and only with the permission of the Board.

The valuation was based upon assumptions and methods adopted by the Board, information furnished by the City, including Retirement System benefits, financial transactions, active members, terminated members, retirants and beneficiaries. Data was checked for internal and year-to-year consistency, but was not otherwise audited by us. As a result, we are unable to assume responsibility for the accuracy or completeness of the information provided.

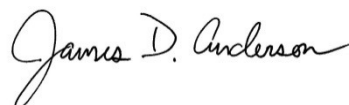

The date of the valuation was June 30, 2015. Future actuarial measurements may differ significantly from those presented in this report due to such factors as experience differing from that anticipated by actuarial assumptions, changes in plan provisions, actuarial assumptions/methods or applicable law. Due to the limited scope of this assignment, we did not perform an analysis of the potential range of future measurements.

To the best of our knowledge, this report is complete, accurate, and was made in accordance with standards of practice prescribed by the Actuarial Standards Board and in compliance with the provisions of the City ordinance and union contracts communicated to the actuary. The actuarial assumptions used for the valuation produce results that are reasonable. Louise Gates and James D. Anderson are independent of the plan sponsor and are Members of the American Academy of Actuaries (MAAA) and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein.

Respectfully submitted,

Louise Gates, ASA, MAAA

James D. Anderson, FSA, EA, MAAA

SECTION A
VALUATION RESULTS

**COMPUTED CONTRIBUTIONS FOR THE FISCAL YEAR
BEGINNING JULY 1, 2016**

Contributions for	City's Contributions Expressed as % 's of Active Member Payroll & Dollars	
	General Members	Police Members
Normal Cost		
Service Pensions	9.41%	15.44%
Disability Pensions	1.50%	3.58%
Death-in-Service Pensions	0.37%	0.31%
Deferred Service Pensions	0.82%	0.48%
Refunds of Member Contributions	0.31%	0.19%
Total Normal Cost	12.41%	20.00%
Member Portion**	5.00%	5.40%
Employer Normal Cost %	7.41%	14.60%
Employer Normal Cost \$	\$96,625	\$237,855
Payment on UAL*	\$551,254	\$206,919
Employer Portion - \$	\$647,879	\$444,774

* *The Unfunded Accrued Liability (UAL) was amortized over 12 years for General members and 17 years for Police members based on the Board's current policy. A level dollar amortization method was used in determining contributions for both groups.*

** *Weighted average of employee contribution rates.*

Public Act 728 Certification

The Retirement Board of the City of Riverview Retirement System confirms that the System provides for payment of the required employer contribution as described in Section 20m of Michigan Public Act No. 728 of 2002.

DEVELOPMENT OF FUNDING VALUE OF ASSETS

Year Ended June 30:	2012	2013	2014	2015
A. Funding Value Beginning of Year	\$22,378,159	\$22,716,213	\$24,706,545	\$27,109,406
B. Market Value End of Year	22,916,046	25,145,382	28,613,367	29,440,823
C. Market Value Beginning of Year	22,950,007	22,916,046	25,145,382	28,613,367
D. Non-Investment Net Cash Flow	(298,547)	(166,274)	(378,212)	(568,448)
E. Investment Income				
E1. Market Total: B - C - D	264,586	2,395,610	3,846,197	1,395,904
E2. Amount for Immediate Recognition (7.5%)	1,667,166	1,697,481	1,838,808	2,011,889
E3. Amount for Phased-in Recognition: E1 - E2	(1,402,580)	698,129	2,007,389	(615,985)
F. Phased-In Recognition of Investment Income				
F1. Current Year: 0.25 x E3	(350,645)	174,532	501,847	(153,996)
F2. First Prior Year	616,531	(350,645)	174,532	501,847
F3. Second Prior Year	18,707	616,531	(350,645)	174,532
F4. Third Prior Year	(1,315,158)	18,707	616,531	(350,645)
F5. Total	(1,030,565)	459,125	942,265	171,738
G. Funding Value End of Year: A + D + E2 + F5	22,716,213	24,706,545	27,109,406	28,724,585
H. Funding Value Rate of Return	2.86%	9.53%	11.34%	8.14%
I. Market Value Rate of Return	1.16%	10.49%	15.41%	4.93%
J. Ratio of Funding Value to Market Value	0.99	0.98	0.95	0.98

**DERIVATION OF EXPERIENCE GAIN (LOSS)
YEAR ENDED JUNE 30, 2015**

Actual experience will never (except by coincidence) coincide exactly with assumed experience. It is hoped that gains and losses will cancel each other over a period of years, but sizable year-to-year fluctuations are common. Detail on the derivation of the experience gain (loss) is shown below, along with a year-by-year comparative schedule.

(1) UAAL* at start of year	\$7,492,677
(2) Normal cost	519,266
(3) Actual contributions	1,542,020
(4) Interest accrual	523,598
(5) Expected UAAL before changes: (1) + (2) - (3) + (4)	6,993,521
(6) Change from benefit improvements	0
(7) Change from revised actuarial assumptions/methods	0
(8) Expected UAAL after changes: (5) + (6) + (7)	6,993,521
(9) Actual UAAL at end of year	6,217,526
(10) Gain (Loss): (8) - (9)	\$ 775,995
(11) Gain (Loss) as percent of AAL at start of year	2.2%

* *Unfunded Actuarial Accrued Liabilities.*

Valuation Date	Experience Gain (Loss) as % of Beginning Accrued Liability
June 30	
2006	(4.8) %
2007	1.9
2008	(2.3)
2009	(3.4)
2010	(6.0)
2011	(4.9)
2012	0.2
2013	3.2
2014	3.0
2015	2.2

ACTUARIAL BALANCE SHEET – JUNE 30, 2015

Present Resources and Expected Future Resources

	<u>General</u>	<u>Police</u>	<u>Total</u>
A. Present valuation assets			
1. Funding value of assets	\$15,629,203	\$13,095,382	\$28,724,585
B. Actuarial present value of expected future employer contributions			
1. For normal costs	688,791	1,839,672	2,528,463
2. For unfunded actuarial accrued liability	4,265,037	1,952,489	6,217,526
3. Total	4,953,828	3,792,161	8,745,989
C. Actuarial present value of expected future member contributions	475,995	640,306	1,116,301
D. Total actuarial present value of expected future benefit payments	<u>\$21,059,026</u>	<u>\$17,527,849</u>	<u>\$38,586,875</u>

Actuarial Present Value of Expected Future Benefit Payments

	<u>General</u>	<u>Police</u>	<u>Total</u>
A. To retirants and beneficiaries	\$15,314,069	\$ 5,948,855	\$21,262,924
B. To vested terminated members	428,459	974,345	1,402,804
C. To present active members			
1. Allocated to service rendered prior to valuation date	4,151,712	8,124,671	12,276,383
2. Allocated to service likely to be rendered after valuation date	1,164,786	2,479,978	3,644,764
3. Total	5,316,498	10,604,649	15,921,147
D. Total actuarial present value of expected future benefit payments	<u>\$21,059,026</u>	<u>\$17,527,849</u>	<u>\$38,586,875</u>

* Revised actuarial assumptions/methods.

Retirement System amended.

The Ratio of Valuation Assets to AAL is a traditional measure of a system's funding progress. Except in years when the system is amended or actuarial assumptions are revised, this ratio can be expected to increase gradually toward 100%.

The Ratio of UAAL to Valuation Payroll is another relative index of condition. Unfunded actuarial accrued liabilities represent debt, while active member payroll represents the system's capacity to collect contributions to pay toward debt. The lower the ratio, the greater the financial strength and vice-versa.

COMMENTS

COMMENT A: The experience of the System was overall favorable during the year ended June 30, 2015. During this period, System assets earned less than the long-term assumed rate (7.5% net of expenses). However, the market smoothing techniques used for your actuarial valuation recognize only part of the current and prior investment gains and losses. As a result, the rate of return recognized in this valuation of the System was 8.14%. This information is shown in detail on page A-2 of this report. In addition, pays increased by less than expected during the year which contributed to the favorable experience.

COMMENT B: The funded ratio of the Retirement System as of June 30, 2015 was 82.2%. The ratio as of June 30, 2014 was 78.3%. The increase in the funded ratio since the prior year is due to the favorable System experience. If the market value of System assets were used to measure the funding ratio as of June 30, 2015, the result would be 84.2%.

COMMENT C: The Retirement System is closed to new City employees. New Police Patrol Officers hired after July 1, 2013 join the City's defined contribution pension plan. New General City employees hired after various dates during 2003-2005 are also required to join the City's defined contribution pension plan.

COMMENT D: The Riverview Code of Ordinances requires a transfer to the Reserve for Retired Benefit Payments from the Reserve for Employer Contributions whenever the balance in the Reserve for Retired Benefit Payments is less than the reported value of pensions being paid. Assets and liabilities as of June 30, 2015 are shown below:

	<u>\$ Amount</u>
Retired Benefit Payments Reserve	\$19,097,134
Retired Life Liabilities	<u>21,262,924</u>
Difference	\$ 2,165,790

The reported assets in the Reserve for Retired Benefit Payments were less than the value of pensions as of June 30, 2015 by \$2,165,790. Therefore, we recommend a transfer of \$2,165,790 to the Reserve for Retired Benefit Payments.

SECTION B
VALUATION DATA

BRIEF SUMMARY OF BENEFIT PROVISIONS EVALUATED (JUNE 30, 2015)

REGULAR RETIREMENT (NO REDUCTION FOR AGE):

Eligibility - General and Police Chiefs: Age 55 with 25 years of service, or age 60. Police (Command Officers and Patrolmen): Age 50 with 25 years of service.

Annual Amount - General and Police Chiefs: Average Final Compensation times the sum of a) 2.0% times the first 25 years of service, plus b) 1.0% times years of service in excess of 25 years. Command Officers and Patrolmen: 2.5% of AFC times all years of service to a maximum of 75% of AFC. Clerical: 2.25% of AFC times all years of service to a maximum of 70% of AFC. DPW: 2.25% of AFC times all years of service to a maximum of 75% of AFC.

Type of Average Final Compensation (AFC) - General and Police Chiefs: Highest 5 years out of last 10. Police: Highest 3 years out of last 10. Covered compensation includes base salary, overtime and longevity pay. Clerical and DPW: Covered compensation includes base salary and longevity pay.

DEFERRED RETIREMENT (VESTED BENEFIT):

Eligibility - All employees: 5 years of service. Benefit begins upon attainment of age 60 for employees with less than 25 years of service, or upon attainment of age 55 for employees with 25 or more years of service.

Annual Amount - Computed as regular retirement but based upon service and average final compensation at time of termination. If an employee's service at termination is less than 10 years, the vested benefit is reduced to the percentage shown in the following vesting schedule.

Years of Service	Percent Vested
5, but less than 6	50%
6, but less than 7	60
7, but less than 8	70
8, but less than 9	80
9, but less than 10	90
10 or more	100

DUTY DISABILITY RETIREMENT:

Eligibility - No age or service requirements.

Annual Amount - To age 55 or 25th anniversary date if later, benefit equals one-half of average final compensation. At age 55 or 25th anniversary date, benefit is recomputed to grant additional service credit from date of disability to date of conversion, based upon regular retirement formula.

**BRIEF SUMMARY OF BENEFIT PROVISIONS EVALUATED
(JUNE 30, 2015)**

NON-DUTY DISABILITY RETIREMENT:

Eligibility - 10 years of service.

Annual Amount - To age 55 benefit equals 2% of average final compensation times years of service. At age 55 benefit is recomputed based upon regular retirement with no additional service credit granted for years of disability.

DUTY DEATH BEFORE RETIREMENT:

Eligibility - No age or service requirements.

Annual Amount - Refund of accumulated contributions plus a benefit equal to 25% of final compensation to the widow for life or until remarriage and equal shares of 20% of final compensation to unmarried children under 18.

NON-DUTY DEATH BEFORE RETIREMENT:

Eligibility - 20 years of service or age 60 with 10 years of service.

Annual Amount - Computed as regular retirement but actuarially reduced in accordance with a 100% joint and survivor election. Benefit terminates upon remarriage of beneficiary.

MEMBER CONTRIBUTIONS:

5.0% of annual compensation for all plan members, except for Police Command employees who contribute 6.0% of annual compensation.

OTHER:

Effective July 1, 2003, all new DPW employees will be excluded from membership in the Retirement System.

Effective January 1, 2004, all new Clerical employees will be excluded from membership in the Retirement System.

The June 30, 2005 valuation reflects the closure of the Retirement System to new City employees of the Administrator's division.

Effective July 1, 2013, all new Police Patrol employees will be excluded from membership in the Retirement System.

SECTION C
OPERATION OF THE SYSTEM

BASIC FINANCIAL OBJECTIVE OF A RETIREMENT SYSTEM

Benefit Promises Made Which Must Be Paid For: A retirement system is an orderly means of handing out, keeping track of, and financing contingent pension promises to a group of employees. As each member of the Retirement System acquires a unit of service credit they are, in effect, handed an "IOU" which reads: *"The City of Riverview Retirement System promises to pay you one unit of retirement benefits, payments in cash, commencing when you retire."*

The principal related financial question is: ***When shall the money required to cover the "IOU" be contributed?*** This year, when the benefit of the member's service is received? Or, some future year when the "IOU" becomes a cash demand?

The Constitution of the State of Michigan is directed to the question:

"Financial benefits arising on account of service rendered in each fiscal year shall be funded during that year and such funding shall not be used for financing unfunded accrued liabilities."

This Retirement System meets this constitutional requirement by having the following ***Financial Objective: To establish and receive contributions, expressed as percents of active member payroll which will remain approximately level from year to year*** and which will not have to be increased for future generations of taxpayers.

Translated into actuarial terminology, a level percent-of-payroll contribution objective means that the contribution rate must be at least:

Normal Cost (the present value of benefits likely to be paid on account of members' service being rendered in the current year)

. . . plus . . .

Interest on the Unfunded Actuarial Accrued Liability (the difference between the actuarial accrued liability and current system assets).

If contributions to the Retirement System are less than the preceding amount, the difference, plus investment earnings not realized thereon, will have to be contributed at some later time, or, benefits will have to be reduced to satisfy the fundamental fiscal equation under which all retirement systems must operate; that is:

$$\mathbf{B = C + I - E}$$

Benefit payments to any group of members and their beneficiaries cannot exceed the sum of:

Contributions received on behalf of the group

. . . plus . . .

Ivestment earnings on contributions received and not required for immediate cash payments of benefits

. . . minus . . .

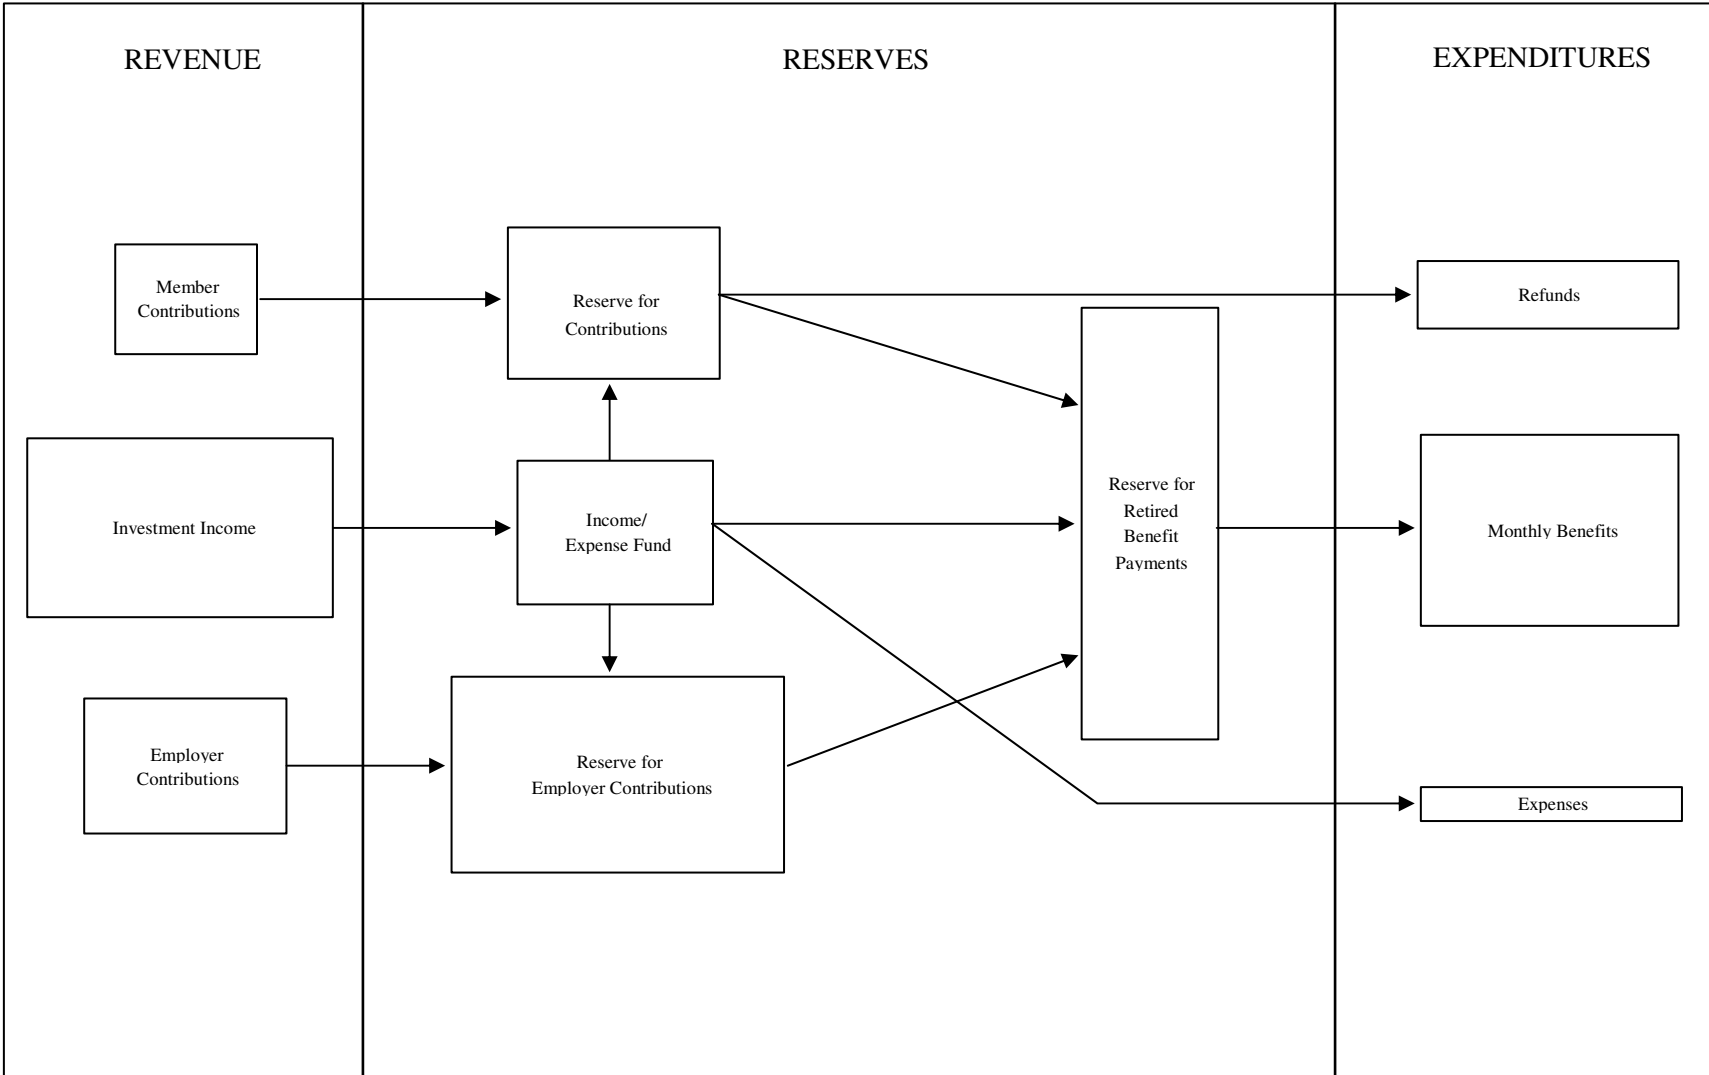

Expenses incurred in operating the system.

There are retirement systems designed to defer the bulk of contributions far into the future. The present contribution rate for such systems is artificially low. The fact that the contribution rate is destined to increase relentlessly to a much higher level is often ignored. *This method of financing is prohibited in Michigan by the state constitution.*

A by-product of a level percent-of-payroll contribution objective is the accumulation of invested assets. Investment income on accumulated assets becomes a major contributor to the retirement system, and the amount is directly related to the amount of contributions and investment performance.

Computed Contribution Rate Needed To Finance Benefits. From a given schedule of benefits and from the data furnished, the actuary calculates the contribution rate *by means of an actuarial valuation* - the technique of assigning monetary values to the risks assumed in operating a retirement system.

FLOW OF MONEY THROUGH THE RETIREMENT SYSTEM

SECTION D

VALUATION METHODS AND ASSUMPTIONS

ACTUARIAL METHODS

Normal cost and the allocation of benefit values between service rendered before and after the valuation date was determined using an *individual entry-age actuarial cost method* having the following characteristics:

- the annual normal costs for each individual active member, payable from the date of employment to the date of retirement, are sufficient to accumulate the value of the member's benefit at the time of retirement;
- each annual normal cost is a constant percentage of the member's year by year projected covered pay.

Financing of Unfunded Actuarial Accrued Liabilities (UAAL): Unfunded Actuarial Accrued liabilities were amortized using the level dollar amortization method.

Funding Value of Assets: The funding value of assets recognizes assumed investment income fully each year. Differences between actual and assumed investment income are phased in over a closed 4-year period. During periods when investment performance exceeds the assumed rate, funding value of assets will tend to be less than market value. During periods when investment performance is less than the assumed rate, funding value of assets will tend to be greater than market value. The funding value of assets is unbiased with respect to market value. At any time it may be either greater or less than market value. If actual and assumed rates of investment income are exactly equal for 4 consecutive years, the funding value will become equal to market value.

Investment information related to Plan activity is reported by the City in the aggregate for part of the fund. Trust assets are allocated to both General and Police groups based on reported fund activity for each group. If an actual accounting of trust assets by group were provided, the computed contribution rate results may be different than those shown in this report.

ACTUARIAL ASSUMPTIONS USED FOR THE VALUATION

The contributions and benefit values of the System are calculated by applying actuarial assumptions to the benefit provisions and people information furnished, using the actuarial cost methods described on the previous page.

The principal areas of financial risk which require assumptions about future experiences are:

- long-term rates of investment return to be generated by the assets of the System
- patterns of pay increases to members
- rates of mortality among members, retirants and beneficiaries
- rates of withdrawal of active members
- rates of disability among members
- the age patterns of actual retirement

In a valuation, the monetary effect of each assumption is calculated for as long as a present covered person survives - - - a period of time which can be as long as a century.

Actual experience of the System will not coincide exactly with assumed experience, regardless of the choice of the assumptions. Each valuation provides a complete recalculation of assumed future experience and takes into account all past differences between assumed and actual experience. The result is a continual series of adjustments (usually small) to the computed contribution rate.

From time to time it becomes appropriate to modify one or more of the assumptions to reflect experience trends (but not random year-to-year fluctuations).

The rate of investment return was 7.5% (net of expenses) a year, compounded annually. This assumption is used to make money payable at one point in time equal in value to an amount of money payable at another point in time. The assumed real rate of return (the net return in excess of the wage inflation rate) was 3.5%.

The rates of salary increase used for individual members are in accordance with the following table. This assumption is used to project a member's current salary to the salaries upon which benefit amounts will be based.

Salary Increase Assumptions for an Individual Member			
Sample Ages	Merit & Seniority	Base (Economic)	Increase Next Year
20	4.0%	4.0%	8.0%
25	3.3	4.0	7.3
30	2.8	4.0	6.8
35	2.5	4.0	6.5
40	2.2	4.0	6.2
45	1.8	4.0	5.8
50	1.2	4.0	5.2
55	0.7	4.0	4.7
60	0.2	4.0	4.2
65	-	4.0	4.0

The mortality tables used in the valuation of the plan are the RP-2000 Combined Healthy Mortality Table adjusted for mortality improvements to 2020 using projection scale BB.

Sample Ages	Value at Retirement of \$1 Monthly for Life		Future Life Expectancy (Years)	
	Men	Women	Men	Women
50	\$144.67	\$147.85	32.99	35.59
55	137.49	141.58	28.37	30.90
60	128.51	133.44	23.94	26.34
65	117.58	123.33	19.74	21.98
70	104.59	111.45	15.83	17.93
75	89.73	97.95	12.26	14.25
80	73.73	83.02	9.13	10.95

This assumption is used to measure the probabilities of members dying before retirement and the probabilities of each benefit payment being made after retirement.

The rates of retirement used to measure the probability of eligible members retiring during the next year were as follows:

PERCENT OF ELIGIBLE ACTIVE MEMBERS RETIRING WITHIN NEXT YEAR

General & Chiefs		Police	
Retirement Ages	% Eligible	Retirement Ages	% Eligible
55	15%	50	35%
56	15	51	30
57	15	52	30
58	15	53	30
59	15	54	30
60	20	55	30
61	20	56	30
62	30	57	30
63	20	58	30
64	20	59	40
65	80	60	100
66	30		
67	40		
68	50		
69	90		
70	100		

Rates of separation from active membership were as shown below (rates do not apply to members eligible to retire and do not include separation on account of death or disability). This assumption measures the probabilities of members remaining in employment.

Sample Ages	Years of Service	% of Active Members Separating within Next Year	
		General	Police
ALL	0	15.00%	10.00%
	1	10.00	7.00
	2	8.00	5.00
	3	7.00	4.00
	4	6.00	3.50
25	5 & Over	6.00	3.50
30		5.10	2.90
35		2.70	1.50
40		1.60	0.60
45		1.10	0.50
50		1.00	0.50
55		1.00	0.50
60		1.00	0.50

Rates of disability were as follows:

Sample Ages	% of Active General Members & Chiefs Becoming Disabled within Next Year		% of Active Police Members Becoming Disabled within Next Year
	Men	Women	All
20	0.15%	0.06%	0.14%
25	0.18	0.10	0.23
30	0.20	0.15	0.48
35	0.29	0.27	0.79
40	0.42	0.39	1.10
45	0.65	0.57	1.42
50	1.05	0.91	1.73
55	1.84	1.54	2.05
60	3.06	2.21	
65	3.30	1.97	

For police members (except chiefs), 50% of disability retirements were assumed to be duty-related.

SUMMARY OF ASSUMPTIONS USED
JUNE 30, 2015
MISCELLANEOUS AND TECHNICAL ASSUMPTIONS

Marriage Assumption:	100% of males and 100% of females are assumed to be married for purposes of death-in-service benefits. Male spouses are assumed to be three years older than female spouses.
Pay Increase Timing:	Middle of year.
Decrement Timing:	Middle of year.
Eligibility Testing:	Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
Benefit Service:	Exact fractional service is used to determine the amount of benefit payable.
Decrement Operation:	Disability and mortality decrements do not operate during the first 5 years of service. Disability and turnover do not operate during retirement eligibility.
Normal Form of Benefit:	The assumed normal form of benefit is the straight life form.
Option Factors:	Option factors are based upon 7% interest and the 1971 GAM with a 90% Male/10% Female Blend.
Disability:	One hundred percent of disabilities among active General members were assumed to be non-duty disabilities. Fifty percent of disabilities among Police and Command Officers were assumed to be non-duty and fifty percent were assumed to be duty related.

GLOSSARY

Actuarial Accrued Liability - The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as "accrued liability" or "past service liability."

Accrued Service - The service credited under the plan which was rendered before the date of the actuarial valuation.

Actuarial Assumptions - Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turn-over and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.

Actuarial Cost Method - A mathematical budgeting procedure for allocating the dollar amount of the "actuarial present value of future plan benefits" between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the "actuarial funding method."

Actuarial Equivalent - A single amount or series of amounts of equal value to another single amount or series of amounts, computed on the basis of the rate(s) of interest and mortality tables used by the plan.

Actuarial Present Value - The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.

Amortization - Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.

Experience Gain (Loss) - A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used.

GLOSSARY

Funding Value of Assets - The value of assets derived by spreading differences between assumed and actual investment return in equal dollar installments over four years. This treatment removes the timing of investment activities from the valuation process.

Normal Cost - The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as "current service cost." Any payment toward the unfunded actuarial accrued liability is not part of the normal cost.

Reserve Account - An account used to indicate that funds have been set aside for a specific purpose and are not generally available for other uses.

Unfunded Actuarial Accrued Liability - The difference between the actuarial accrued liability and valuation assets. Sometimes referred to as "unfunded accrued liability."

Valuation Assets - The value of current plan assets recognized for valuation purposes.

Mr. Douglas Drysdale
City of Riverview Retirement System
14100 Civic Park Drive
Riverview, Michigan 48192-7689

Dear Doug:

We are enclosing 15 copies of the fifty-fifth annual actuarial valuation report of the City of Riverview Retirement System.

Sincerely,

A handwritten signature in cursive script that reads "Louise Gates".

Louise M. Gates, ASA, MAAA
