Controller cabinet Open the cabinet for the irrigation controller and make sure it is free of debris such as cobwebs or dirt.

Replaced controller battery

Wiring Check all wiring connections for wear and breakage. Repair if necessary.

Time/day settings -Check the time/day settings on your controller to make sure they are correct.

### **Sprinkler System**

Flush system before running the system, remove the last sprinkler head in each line and let the water run for a few minutes to flush out any dirt and debris. Replace the sprinkler heads and turn the system on, running one valve at a time.

Broken or clogged heads- Look for obviously broken or clogged heads and make the necessary repairs.

Broken/leaking valve or pipe Observe the lowest head in each station for leaks.

High pressure - Look for a very fine mist from spray heads caused by excessive pressure in the system. Correct the problem by turning the flow control down.

Low pressure Check to see if the sprinklers are covering the desired area uniformly.

Incorrect spray arc Check to see that irrigated areas are being covered completely. Consider adjusting the spray pattern if possible, or replace the spray nozzle(s) with another that has the correct spray pattern.

Over-spray Look for over-spray of sprinklers onto sidewalks, driveways, and streets. The sprinklers' spray patterns should either be adjusted or changed to a pattern that will stay within the planting area.

Spray pattern blocked or misdirected Look for blocked spray patterns. Remove vegetation and other obstructions that may be blocking the spray.
