

DID YOU KNOW?

Over application of deicers on our sidewalks and roads can run off and make their way into our local water bodies through ditches and storm inlets, carrying with it chemicals and contaminants that have negative impacts to water quality.

Winter STORMWATER Tips

Shovel first!

The more snow you remove to begin with will mean less use of salt and deicers later on.

Slow down!

Allow snow plows time/space to get snow removed from streets. This means less deicing materials used by the city and will prevent snow from getting packed down.

Sweep it up!

Sweep up any excess salt after your sidewalks and driveways are dry and clear of ice/snow, then reuse it for the next storm!
